

Efficiency is the key: Thur Metall's new TM-KFZ vehicle workshop system

Process optimisation has reached the workshop: Thur Metall, one of the leading workplace furnishing companies in Switzerland, understands that car companies are increasingly recognising the benefits of efficient processes and are reorganising to accommodate for this. With the TM-KFZ vehicle workshop system, the long-established company now offers automotive customers a perfectly coordinated, fully integrated solution consisting of modules, superstructures and accessories to optimise their workflows.

Industry-specific solutions

The manufacturer's drawer cabinets form the basis of the system. For years, they have stood for high-quality workshop equipment, and have now been supplemented by industry-specific solutions. A liquid module with hose ports allows for the safe and clean handling of oils and lubricants. Similarly, the TM-KFZ energy module can be equipped with all essential connections and ports in the workshop environment (e.g. for compressed air).

Can be combined and individually adapted as required

"Thur Metall knows what is important in the automotive industry," asserts sales manager Peter Kretz. In addition to the various drawer cabinets, the system includes a wide range of workbenches, workbench superstructures, cabinets and partition materials, which comprehensively meet all of the industry's requirements and can be flexibly combined as required. Kretz refers to the "countless configurations" as being another key product advantage. The individual modules can be

specially configured for each customer. A variety of colours and colour combinations are available. In addition to the standard key-based lock, an innovative RFID lock is available, which reliably and conveniently controls access via radio frequency identification.

The TM-KFZ vehicle workshop system therefore provides intelligent, reliable support for smooth workflows in the automotive sector. Wait times are reduced, productivity is increased, and – rather than working under time pressure – work can be done in an efficient and timely manner. A five-year guarantee and suitable solutions for storage and recreation rooms are also part of the offer.
